As many as 5 million Americans are living with Alzheimer’s disease, a number that is expected to nearly triple by 2060.

For families affected by Alzheimer’s disease and other forms of dementia, a diagnosis is just the beginning.

Our highly trained caregivers at OSF HealthCare Illinois Neurological Institute work with families to provide therapy, slow the progression of disease and make necessary lifestyle adjustments. Our team helps each person and family understand the treatment options available, so they can make a plan that’s best for them.

To learn how you can support families affected by Alzheimer’s and dementia, visit: osfhealthcarefoundation.org/neurosciences

There is no cure for Alzheimer’s disease and most types of dementia, but early detection can allow therapy to begin sooner and slow the progression of disease. While there is no proven way to prevent dementia, research suggests that some healthy habits can lower your chances of dementia.

Your donation will support community education about the signs of dementia, as well as ways to prevent or slow the progression of symptoms.

Together, donors, volunteers and health care providers can make a difference for families affected by Alzheimer’s disease and memory loss.
